

Six runs by one agent:

4 one chamber

2 partial

0 complete

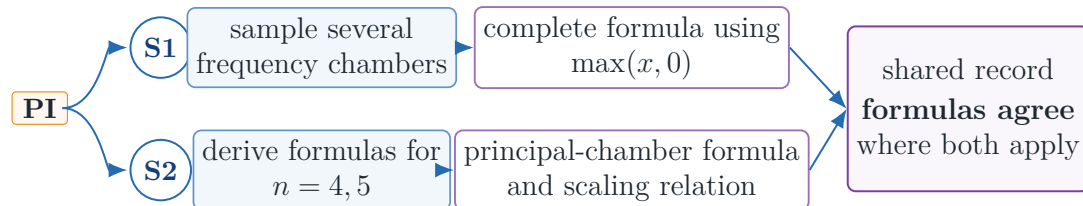

Two PI-student runs: both complete

Claude Opus 4.8

two tasks in round 1; PI checks in round 2

Round 1

PI assigns different formula and data tasks

Round 2: PI checks

PI checks separately written code

- ✓ 142/142 exact matches
- ✓ 95 tests beyond the principal chamber

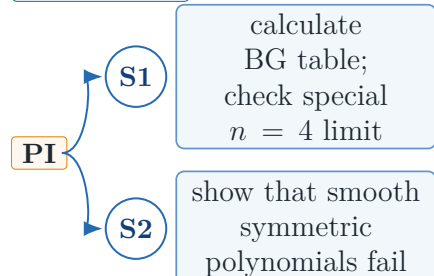

ACCEPT

Codex 5.5

round 1 finds two missing pieces; round 2 solves them; round 3 tests both

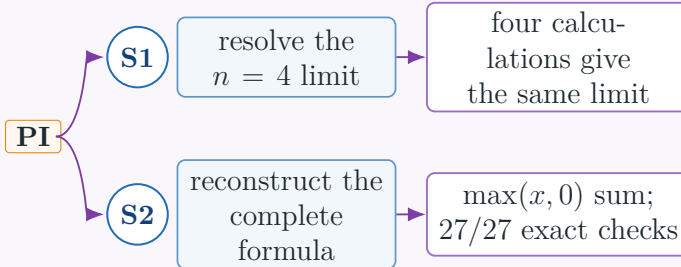

Round 1

initial exploration

Still needed: $n = 4$ limit and complete formula

Round 2: two parallel tasks

both results added to the shared record

Round 3: PI checks

both results tested independently

- ✓ 12/12 exact away from $n = 4$
- ✓ 12 paths to the $n = 4$ limit
max. error $2.0 \times 10^{-12} < 10^{-10}$

ACCEPT
